Profile

MERN Stack Developer and **B.Tech** Computer Engineering student with hands-on experience building scalable **full-stack web applications**. Strong foundation in RESTful APIs, authentication systems, and **responsive UI** development. Passionate about building **real-world problem-solving applications**.

Skills

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Framer Motion, react-query

Backend: Node.js, Express.js, Redis, Kafka

Database: MongoDB

Authentication & APIs: JWT, REST APIs, Google OAuth, LinkedIn OAuth, OTP verification

Tools: Git, GitHub, Postman, Vercel, Render, OpenRouter, Draw.io, Canva, Google App Script

Languages: Java (Basics), Python (Basics)

Other: Multer, Nodemailer, Resend, Node-Cron, Jitsi Meeting

Soft Skills: Problem-solving, Team collaboration, Time management

Projects

HRM – Human Resource Management Platform

Tech: MERN, JWT, Framer Motion, Cloudinary, React-Query, Resend, OAuths, Jitsi, Multer, Node-Cron

Built a full-stack recruitment and HR management platform supporting candidates, recruiters, and administrators with features including **job posting, application tracking, resume management, company profiles, feedback/reporting systems, OTP verification, and integrated video interviews, advertising system**. Developed a React 19 (Vite) frontend with Tailwind CSS, React Router v7, **React Query, role-based dashboards**, file uploads, and **Jitsi-powered meeting integration**. Engineered a Node.js/Express backend with MongoDB/Mongoose, JWT authentication, secure refresh-token workflows, Google & LinkedIn OAuth, RBAC authorization, Cloudinary media storage, Resend email services, validation layers, rate limiting, and scheduled automation jobs, delivering a scalable **SaaS architecture** with end-to-end full-stack ownership.

FlowSync – AI-Powered Productivity Platform

Tech: MERN, JWT, Resend, OpenRouter, Framer Motion, Tanstack/Table, DnD Kit, Recharts.js

Built a **full-stack** productivity platform to manage **workspaces → projects → tasks** with a drag-and-drop **Kanban board**, analytics dashboard, and **voice + chat assistants**. Built using React 19 (Vite), Tailwind CSS, Framer Motion, DnD Kit, Recharts, @tanstack/react-table, and **Google OAuth** on the frontend, with a Node.js (ESM) + Express v5 backend using MongoDB/Mongoose, JWT + bcrypt auth, and secure middleware (helmet, cors, compression). Integrated AI pipeline via **OpenRouter & Sarvam API** for voice command execution and chatbot support, demonstrating end-to-end full-stack ownership.
